Title :	Requirements on information technology in Estonian Language and cultural environment		
Scope :	<p>The revision of EVS 8 "Requirements on information technology in estonian language and cultural environment" is not conditioned by necessity to update outdated descriptions of cultural elements or provide conformance with new international standards. These aspects are important, however, the main reason behind the revision is to guarantee the longevity of the Estonian locale by providing the data in more abstract form. This revision is fully Unicode-centered, mentioning the restricted code pages only as recommendations as to which are better suited to use in outdated and restricted software environments. No changes are made in the ESET1 section (Repertoire of Latin Characters) of the previous standard, which also implies replacing the use of restricted code pages with much wider character repertoire.</p> <p>The solutions of this standard are based on international standards, EU standards and national language support means of IBM and Microsoft etc. For character encoding, Unicode is the preferred solution and the use of single-byte character sets should be avoided.</p> <p>Appendix E that contains the full present localized data for Estonian is added.</p>

Title :	German standard methods for the examination of water, waste water and sludge - Gaseous components (group G) - Part 3: Determination of ozone (G 3)		
Scope :	The document describes three chemical methods for the determination of ozone in drinking water and swimming pool water. For the determination of higher concentrations an iodometric method is prescribed. Lower concentrations are photometrically determined using indigotrisulphonate or N,N-diethyl-p-phenylenediamine.

Title : German standard methods for the examination of water, waste water and sludge - Bio-assays (group L) - Part 3: Determination of the dehydrogenase activity (TTC-Test) (L 3)

Scope : This standard specifies a biological method of the determination of toxicity through comparison the dehydrogenase activity using 2,3,5-Triphenyltetrazoliumchlorid (TTC) of domestic and industrial waste waters and waste water constituents from sewage and activated sludge from a activated sludge treatment. The incubation time is one hour for 20 <Grad>C in the dark. Uncoloured, water soluble TTC, that act as an indicator, reduce to red, water unsoluble Triphenylformazane (TPF) using the dehydrogenase in activated sludge. TPF extract with ethanol and photometric determine by 485 nm. A inhibition over 20 % is significant.

Title : Handling of flammable liquids in harbour area

Scope : This standard applies to general planning of harbours, handling of flammable liquids in the quay area of a harbour, transferring cargo between the harbour and ship as well as to fire extinguishing and firefighting systems in the harbour, other quay equipment and operating the harbour area.

Harbour area consists of the shore area and of the harbour and the quays used for mooring vessels, transferring cargo and operating the harbour area.

In addition to liquid bulk cargo, the standard is applied to handling of bulk cargo. The standard applies to temporary storage of transport containers used for transferring cargo in the harbour area.

In this standard, flammable liquid refers to flammable chemicals, oil products and similar chemical products to which flammability is an essential chemical characteristic. This standard is not applied to stationary storage of flammable liquids in tanks or in bulk storage.
