**National Ref :** ÖNORM H 6027

**Title :** Ventilation and air conditioning plants - Fire doors and shutters for air distribution systems on the basis of intumescent materials with or without mechanical closing element - Application and installation

**Scope :** Diese ÖNORM legt die Anforderungen an die Verwendung und den Einbau von Feuerschutzabschlüssen in Lüftungsleitungen auf Basis intumeszierender Materialien mit mechanischem oder ohne mechanisches Verschlusselement in Bauwerken fest. Intumeszierende Feuerschutzabschlüsse können unter bestimmten Voraussetzungen in Lüftungstechnischen Anlagen, dort wo Luftleitungen einen Brandabschnitt durchstoßen, die Ausbreitung von Feuer und Rauch durch die Luftleitung verhindern. Intumeszierende Feuerschutzabschlüsse sind ohne begleitende Maßnahmen nicht geeignet, den Durchtritt von Rauch mit einer Temperatur unterhalb der Auslösetemperatur des intumeszierenden Materials zu verhindern. Sie sind deshalb nicht gleichwertig und kein Ersatz für automatisch über rauchempfindliche Elemente auslösende Brandschutzklappen und dürfen nur in jenen Anwendungsfällen verwendet werden, in denen solche automatische Klappen nicht eingesetzt werden müssen. Die Anwendung von Feuerschutzabschlüssen in Lüftungsleitungen auf Basis intumeszierender Materialien mit mechanischem oder ohne mechanisches Verschlusselement wird z. B. durch Vorgaben der Behörde, einschlägige technische Richtlinien oder durch ein Brandschutzkonzept geregelt. Die Anforderungen, Nachweise, Güteüberwachung und Kennzeichnung werden in den Verwendungsgrundsätzen OIB-095.4-001/06-005 und OIB-095.4-002/05-009 Ausgabe 2006.04 festgelegt. Feuerschutzabschlüsse auf Basis intumeszierender Materialien mit mechanischem oder ohne mechanisches Verschlusselement (FLI/FLI – VE) sind ausschließlich in lufttechnischen Anlagen zur Be- und Entlüftung mehrerer übereinander liegender Wohnräume, Küchen und Räume mit wohnraumähnlicher Nutzung oder Nassräume zu verwenden. Brandschutzklappen sind nicht Gegenstand dieser ÖNORM.

**Title :** Plastics piping systems of reinforced polypropylene with multilayer wall structure (PP-ML) and smooth wall surface for nonpressure underground drainage and sewerage - Dimensions, requirements, tests, proof of conformity

**Scope :** In this ÖNORM the dimensions, requirements, tests and the quality assurance of solid-wall pipes of reinforced polypropylene with multi-layer wall construction and smooth internal and external surfaces as well as of fittings of polypropylene material are defined which are intended to be used for gravity-operated soil and waste discharge systems. Piping systems of polypropylene with structured wall design (e. g. pipes with foamed layers, with profiled external surface) are not within the scope of this standard. In this standard also the procedure for the proof of conformity with this standard is defined. This ÖNORM applies to pipes and fittings which are intended to be used in gravity operated soil and waste discharge systems inside the building structures (application mark "D") and buried, outside the building structures (application mark "U"). The marking of products which fit both application areas is "UD"
