National Ref : ONR 12051**Title :** Directory for proof of suitability of a third party - Structure and content

Scope : This ON Regel (Rule) gives definitions and criteria for the assessment of evidence or information systems and the data included therein; in addition, a classification of the systems in categories on the basis of important criteria enables quick evaluation of suitability for individual users. The present ON Regel supports the selection of the relevant optimal system of evidence among the manifold and different system providers. Due to classification in categories, the systems can be better specified by the system provider - he can describe the system performance more accurately and better comparably for the participant/user because he finds the adequate offer for his need of evidence. Certification and admission systems are not covered.

Title : Prefabricated reinforced components of autoclaved aerated concrete

Scope : This European Standard is for prefabricated reinforced components of autoclaved aerated concrete to be used in building construction for:

- a) Structural elements:
 - loadbearing wall components;
 - retaining wall components;
 - roof components;
 - floor components;
 - linear components (beams and piers).
 - b) Non-structural elements:
-

Scope :

- nonloadbearing wall components (partition walls);
- cladding components (without fixtures) intended to be used for external facades of buildings;
- small box culverts used to form channels for the enclosure of services;
- components for noise barriers.

Depending on the type and intended use of elements for which the components are utilised, the components can be applied - in addition to their loadbearing and encasing function - for purposes of fire resistance, sound insulation and thermal insulation indicated in the relevant clauses of this European Standard.

Components covered by this standard are only intended to be subjected to predominantly non-dynamic actions, unless special measures are introduced in the relevant clauses of this European Standard.

The term ""reinforced"" relates to reinforcement used for both structural and non-structural purposes.

This European Standard does not cover:

- rules for the application of these components in structures;
- joints (except their strength and integrity E of resistance to fire);
- fixtures;
- finishes for external components, such as tiling.

NOTE AAC components may be used in noise barriers if they are designed to fulfil also the requirements of EN 14388.

Title : Anchors for external thermal insulating composite systems - Marking of conformity

Scope : This ÖNORM is applicable to anchors intended to fix mechanically the thermal insulating composite systems for external walls according to ÖNORM B 6400 and ÖNORM B 6405, not only for bonding on the substrate,

Scope : but also for deflexion of horizontal wind suction forces and for provision of a durable frictional adhesion. These anchors are displaced by the insulating material into the load bearing substrate and shall be provided by a European Technical Approval for this application as well as by CEMarking. In combination with ETAG 014, it includes the necessary requirements and specifications for quality testing and quality assurance.

The static strain test according to this ÖNORM does not take into account all secondary weathering influences, but considers only the respective constant extensions and constant ozone concentration, temperature and air humidity. The test shall be performed if only static strain is expected during use. The method is not suitable for the determination of light fastness.
