Title : Road traffic and transport telematics - Automatic dynamic debiting systems and automatic access control systems using dedicated short-range communication at 5.8 GHz -

Title : Compliance checking of GNSS/CN systems over UNI 10607 DSRC

Scope : On-board units working with satellite positioning to collect data required for charging for the use of roads operate in an autonomous way, i.e. without relying on dedicated road-side infrastructure. These OBU may be issued by independent Service Providers directly to users. Toll Chargers have the need to check whether the data regarding road usage they receive are correct. One way of checking the compliance of the data with the rules of the toll regime is to observe a passing vehicle and to interrogate the OBU via a short range communication with an interrogator at road-side (or in another vehicle). In an interoperable environment it is essential that this interrogation communication is standardised such that every Toll Charger can check all passing OBUs. The standards UNI 10607-1, UNI 10607-2, UNI 10607-3 and UNI 10607-4 provide the communication media that is used to fulfil this interrogation.

This UNI Standard defines requirements for short-range communication based on UNI 10607, data to be exchanged, and related protocol messages for the purpose of compliance checking of autonomous EFC systems.

The term: ambient temperature, is intended to indicate the temperature range of temperate regions, excluding the high temperatures typical of industrial composting. The standard takes into account the biodegradable materials at room temperature according to UNI 11183 and establishes criteria for items that made with these materials, are compostable in home composting systems. In the standard the requirements of biodegradation and ecotoxicity are not taken into consideration as such these requirements are already covered by UNI 11183 in reference to plastic materials as based materials for the manufacturing of the items.
