Title : Residential sprinkler systems - Part 2: Requirements and test methods for sprinklers and their accompanying rosettes

Scope : This guideline specifies requirements for construction and performance of residential sprinklers and their rosettes which are operated by a change of state of an element or bursting of a glass bulb under the influence of heat, for use in automatic residential sprinkler systems conforming to INSTA 900-1, Design, installation and maintenance. Test methods and recommended test schedule for type approval testing are also given. The requirements in this guideline are not intended to restrict the application of representative fire and other tests for special sprinklers, as referenced in EN 12845 that are intended to provide protection for specific fire hazards. A product that contains features, characteristics, components, materials, or systems new or different from those covered by the requirements in this guideline, and that involves a risk of fire or of electric shock or injury to persons shall be evaluated using appropriate additional component and end-product requirements to maintain the level of safety as originally anticipated by the intent of this guideline. A product whose features, characteristics, components, materials, or systems conflict with specific requirements or provisions of this guideline does not comply with this guideline. Revision of requirements shall be proposed and adopted in conformance with the methods employed for development, revision, and implementation of this standard.

The classification of burglary resistance and the related requirements are given in ÖNORM EN 1627, the necessary test methods are included in ÖNORM EN 1628, ÖNORM EN 1629 and ÖNORM EN 1630. This Austrian Standard does not take into account the use of vehicles as well as manipulation possibilities and burglary trials on electronic or electromagnetic safety devices. NOTE - Components reachable by motor vehicles or where vehicles can pass through should be protected by appropriate measures such as barriers, retractable ramps, etc. Requirements for bulletproof components are not covered by this Austrian Standard; they are specified in ÖNORM EN 1522.

This Austrian Standard makes reference to provisions for additional burglary resistant equipment systems for windows and doors according to DIN 18104-1 and -2 (except auxiliary locks). This building hardware may be used also as supplement to already installed shutters.

The scope of this ÖNORM does not include finger sets and lock sets for drilled receptions (knob locks) as well as locks for sliding doors. Hinges and hinge protective devices are not covered by this Standard, too.

Title :	Organizational resilience: Security, preparedness and continuity - Management systems - Requirements with guidance for use		

Scope : This Standard specifies requirements for an organizational resilience (OR) management system to enable an organization to develop and implement policies, objectives, and programs taking into account legal requirements and other requirements to which the organization subscribes, information about significant hazards and threats that might impact it and its stakeholders', and protection of critical assets (physical, intangible, environmental, and human). This Standard applies to risks and/or their impacts that the organization identifies as those it can Control, influence, or reduce. It does not itself state specific performance criteria. This Standard is applicable to any organization that wishes to: a) establish, implement, maintain, and improve an OR management system; b) assure itself of its conformity with its stated OR management policy; c) demonstrate conformity with this Standard by: i. making a self-determination and self-declaration; or ii. seeking confirmation of its conformance by parties having an interest in the organization (such as customers); or iii. seeking confirmation of its self-declaration by a party external to the organization; or iv. seeking certification/registration of its OR management system by an external organization. All the requirements in this Standard are intended to be incorporated into any type of organization's OR management system. It provides all the elements required to integrate management, technology, facilities, processes, and people into the resilience culture, risk management, and OR management system of an organization. The extent of the application will depend on factors such as the risk tolerance and policy of the organization; the nature of its activities, products, and services; and the location where, and the conditions in which, it functions. This Standard provides generic requirements as a framework, applicable to all types of organizations (or parts thereof) regardless of size and nature of operation. It provides
