**Title :** Sound insulation and room acoustics in building construction - Part 1: Concepts and units - Supplement 1: Supplement to ÖNORM EN ISO 717-2 - Rating of impact sound insulation by floor coverings on a standard floor  
**Scope :** This Standard describes the method for rating of impact sound insulation and of evaluated impact sound insulation of floor structures on stacked wooden ceilings. This is necessary since the impact sound insulation of a floor structure which has been tested on a homogenous solid concrete ceiling cannot be used for the determination of an evaluated impact sound insulation on wooden ceilings. Therefore, for the determination of the single value of the evaluated impact sound insulation on a stacked wooden ceiling, the determination of a separate reference ceiling is required. The standard impact sound level for the reference wood joist ceilings for the determination of the "evaluated impact sound insulation"  $\Delta L_{w}$  is specified in ÖNORM EN ISO 717-1.
