National Ref : project 101210
Title : Cleaning quality – System for establishing and assessing cleaning quality
Scope : This standard describes a system for establishing and assessing cleaning quality. It is based on the general principles stipulated in EN 13549:2001. The standard describes visual inspection and inspection using measuring instruments. The instrument measuring methods may work as a supplement for special types of premises used for e.g. the production of electronics. The indoor air quality is particularly affected by dust. In order to achieve an acceptable indoor air quality, it may become necessary to stipulate special requirements as regards dust. This is done by using dust measurements. The system can be used in various ways: for inspecting the cleaning quality achieved; for assessing the soiling level and/or the rate of re-soiling; for assessing the cleaning activity necessary to achieve a given level of quality; for establishing the cleaning quality achieved in relation to the cleaning activity. This standard describes exclusively the application of the measuring system for specifying a required quality and for inspecting the cleaning quality achieved. The standard can be used in all types of buildings and localities. The standard describes the result achieved immediately after cleaning has been completed. The standard does not comprise the measurement and control of cleaning-related services, such as replenishing lavatory articles etc.

Country : Austria
Project ID : 00023754/0001 **Project Established**
ICS : 13.220.50, 91.010.30, 91.080.20
National Ref : ÖNORM B 1995-1-2
Title : Eurocode 5: Design of timber structures - Part 1-2: General - Structural fire design - National specifications, national comments and national supplements concerning ÖNORM EN 1995-1-2
Scope : This Austrian Standard specifies national parameters to ÖNORM EN 1995-1-2 and shall be applied jointly with ÖNORM EN 1995-1-2 in Austria. EN 1995-1-2 deals with the design of timber structures for the accidental situation of fire exposure and is intended to be used in conjunction with EN 1995-1-1 and EN 1991-1-2:2002. EN 1995-1-2 only identifies differences from, or supplements normal temperature design. EN 1995-1-2 deals only with passive methods of fire protection. Active methods are not covered. EN 1995-1-2 applies to building structures that are required to fulfil certain functions when exposed to fire, in terms of avoiding premature collapse of the structure (load-bearing function); limiting fire spread (flames, hot gases, excessive heat) beyond designated areas (separating function). EN 1995-1-2 gives principles and application rules for designing structures for specified requirements in respect of the aforementioned functions and levels of performance. EN 1995-1-2 applies to structures or parts of structures that are within the scope of EN 1995-1-1 and are designed accordingly. The methods given in EN 1995-1-2 are applicable to all products covered by product standards made reference to in this Part.

Title :	Design of masonry structures - Simplified calculation methods for unreinforced masonry structures following ÖNORMen EN 1996-3 and B 1996-3		
Scope :	The ONR 21996 provides simplified calculation methods according to EN 1996-3 to facilitate the design of the following unreinforced masonry walls, subject to certain conditions of application: -vertical and earthquake loading walls with wind loading; -walls subjected to concentrated loads; -shear walls; -basement walls subjected to lateral earth pressure and vertical loads; -walls subjected to lateral loads but not subjected to vertical loads; -attestation of existing projects and existing structural elements of masonry. The rules given in ONR 21996 are consistent with those given in EN 1996-1-1, but are more conservative in respect of the conditions and limitations of their use. For those types of masonry structure or parts of structures not covered by scope, the design shall be based on EN 1996-1-1. This ONR 21996 applies only to those masonry structures, or parts thereof, that are described in EN 1996-1-1 and EN 1996-2.

National Ref : ÖNORM ISO 1891
Title : Fasteners - Terminology
Scope : This International Standard provides translation guidance for terms commonly used to describe fasteners. This International Standard lays down the terminology of fasteners in English, French and Russian, recommended for use unless otherwise specified in the appropriate product standard. At present, not all of the fasteners listed are covered by ISO documents. For the main part, the items have been selected from existing national standards. Also included are obsolescent types (those being used up from stock) in order that their terminology may be standardized at the same time. The drawings are essentially diagrammatic, in particular those showing bolts and screws having special characteristics. In addition to terms used in the three official ISO languages (English, French and Russian), this International Standard gives the equivalent terms in Chinese, German, Italian, Japanese, Spanish, and Swedish.

Title : Blind threaded tubular rivets with plate edge head, hexagonal and semi hexagonal shank

Scope : This standard defines dimensions and technical requirements of blind threaded tubular rivets with plate edge head, hexagonal and semi hexagonal shank, with medium and fine closing thickness. These rivets may be used as an alternative to the threaded tubular rivets with cylindrical head, when high rotation holding features are required. These rivets are particularly recommended for assemblings on tubular and box-shielded parts. They can be used on metal sheets when tapping does not assure sufficient holding guarantee and to avoid on the same deep-drawing and following tapping operation. The mounting of these rivets is made with manual and pneumatic equipments.

National Ref :	ONR 20513		
Title :	Multilayer piping systems (PP-ML) for non-pressure underground drainage and sewerage of reinforced polypropylene-compound/-blend - Dimensions, requirements tests, proof of conformity		
Scope :	This ONR lays down terms and definitions, nominal sizes, dimensions, requirements, tests and the quality control for solid-wall multilayer pipes (PP-ML) of reinforced polypropylene-compound or polypropylene-blends for buried gravity drainage and sewerage pipelines. Furthermore this ONR lays down terms and definitions, nominal sizes, dimensions, requirements, tests and the quality control for fittings of one polypropylene compound or of reinforced polypropylene-compounds or of polypropylene-blends for buried gravity drainage and sewerage pipelines. Pipeline systems which relate to ÖNORM EN 14758-1 or to ÖNORM EN 13476-1, -2 or -3 are not subject of this ONR. This ONR also serves as a basis for the procedure of proving the conformity of relevant products. This ONR is applicable for gravity drainage and sewerage systems used within the building structure (application area code "D") and outside the building structure (application area code "U"). The marking of both application area codes is done by means of "UD" on the pipeline components.
