Title : Determination of slip resistance of pedestrian surfaces - Pendulum test method

Scope : The Swedish Authorities have requirements which states that pedestrian surfaces in public places should be planned and constructed to minimize slip hazards. This implies that there is an existing test method to determine slip resistance. Therefore SIS wants to develop a national standard that describes a test method to determine slip resistance.

Title :	Qualification of operators involved in the production chain of biofuels and bioliquids		
Scope :	<p>This Technical Specification defines a qualification scheme for organizations involved in the production chain of biofuels, bioliquids and their intermediates and by-products produced in a sustainable way according with criteria defined by art. 17 of Directive 2009/28/EC (RED).</p> <p>The qualification scheme is also applicable to operators that produce and/or use bioliquids, their intermediates and by-products. This Technical Specification is applicable to a single organization and not for the qualification of the complete chain of custody.</p> <p>It is intended to be used within qualification schemes needed to verify the conformity to criteria defined by art. 18 of the RED. In order to make easier its application, it has to be considered as an integration, for all the aspects linked to the sustainability of products defined by the RED, of existing qualification schemes for management systems (e.g. EN ISO 9001) if already adopted by the organizations. This Technical Specification does not define specific sustainability values or calculation methods, but requires that both values and methodologies, however defined, are managed by the organization in order to assure the conformity to the RED principles and to guarantee traceability and clearness.</p>
