Title : Vibration and shock - Guideline limit values for construction work, open-pit and pit mining and traffic - Part 1: Effects of vibration and air blast from blasting on constructions, including tunnels and rock cavern
Scope : This standard establishes a method for determining guideline limit values for vibrations and air blasts in construction works, including tunnels and rock caverns, caused by blasting in connection to construction work, pit and open pit mining. The standard describes how the vibrations and air blasts shall be measured and evaluated. The limit value for air blasts also applies military blasting and for shots from heavy firearms. The limit values are defined by physical quantities specified in clause 3 and have been specified with the aim of avoiding damage to construction works. The limit values in this part of NS 8141 do not apply to human responses to vibrations, air blasts, infrastructure nor do they apply to damage that may be caused to fixtures, fittings and equipment in the construction works. Measurements of horizontal vibrations in high buildings (four floors or height above 12 m) are primarily included due to evaluation of vibration influence on human beings handled in the third part of this standard. This part of the standard only covers the risk of well-defined vibration and air blast damage and not damage from deformations/settlements of soil in the ground caused by vibrationinducing activities. The standard does not apply to vibrations arising naturally such as earthquakes, wave action, etc.

Title : Universal design of developed outdoor areas - Requirement and recommendation

Scope : The Standard specifies requirement for universal design of developed outdoor areas, with the purpose that all people may have access to the area with the possibility for outdoor activities, outdoor life, recreation, participation and social gathering. The Standard includes developed outdoor areas in connection with building works, green areas, natur- and outdoor areas and transport and communication. The Standard sets requirements for planning, design and performance, measures, elements and equipments. The importance of the right connection between the different measures and the whole picture is emphasized. The Standard does not cover requirements for management, operation and maintenance, but requires that this shall be emphasized in the planning, design and performance stage and when choosing the measures. The Standard also includes recommendations to increase the accessibility where universal design is not achievable.
