## Monthly Notifications Register

Notifications registered at CCMC from 2012-01-01 to 2012-01-31

Sector B : BUILDING AND CONSTRUCTION

Register issued on : 2012-02-02

## Subsector B01: FIRE PROTECTION

---

**Subsector :** B01 **Registration Date :** 2012-01-17  
**Organization :** EVS  
**Country :** Estonia  
**Project ID :** 00106579/0001 **Project Established**  
**ICS :** 91.140.10  
**National Ref :** project 106579  
**Title :** Smoke and heat control systems - Design, installation, maintenance  
**Scope :** Standard gives guidelines for fighting against smoke distribution in case of fire. Current standard concentrates on natural and mechanical smoke extraction systems and overpressure smoke control/prevention systems, designing and level of automation as well as gives demands on installation, control and keeping systems in order.

**Relatedness :**

National : New

---

---

**Subsector :** B01 **Registration Date :** 2012-01-26  
**Organization :** EVS  
**Country :** Estonia  
**Project ID :** 00106749/0001 **Project Established**  
**ICS :** 01.040, 13.220  
**National Ref :** prEVS 812-1  
**Title :** Fire safety of constructions - Part 1: Vocabulary  
**Scope :** The aim of modification of Estonian standard is to eliminate conflicting terminology with EN ISO 13943:2010.

**Relatedness :**

National : REV/AMD EVS 812-1:2005

---

---

**Subsector :** B01 **Registration Date :** 2012-01-26  
**Organization :** EVS  
**Country :** Estonia  
**Project ID :** 00106750/0001 **Project Established**  
**ICS :** 13.220.50, 91.060, 91.140.10  
**National Ref :** prEVS 812-3  
**Title :** Fire safety of constructions - Part 3: Heating systems  
**Scope :** Standard specifies fire safety requirements for heating systems in buildings, including fuel storage rooms.

**Relatedness :**

National : REV/AMD EVS 812-3:2007

---

---

**Subsector :** B01 **Registration Date :** 2012-01-05  
**Organization :** BSI

---

**Subsector :** B13 Registration Date : 2012-01-12  
**Organization :** ASI  
**Country :** Austria  
**Project ID :** 00024354/0001 Project Established  
**ICS :** 27.160  
**National Ref :** ÖNORM M 7777-2  
**Title :** Solar thermal systems - Part 2: Standstill performance and hydraulic circuit modules - Complementary provisions to ÖNORM EN 12977  
**Scope :** The present Austrian Standard shall be applied with ÖNORM EN 12977 to planning, installation and operation of systems using thermal solar collectors with heat transfer fluids. It applies to small and medium sized solar thermal systems for hot water supply, heating support and general thermal use up to a gross collector surface of 50 m<sup>2</sup>, except drain back and thermal siphon systems. Part 2 concerns particularly problems related to standstill behaviour of small and medium sized systems and the resulting hydraulic switching connections.

#### Subsector B20: DRAINAGE EQUIPMENT

---

**Subsector :** B20 **Registration Date :** 2012-01-17  
**Organization :** EVS  
**Country :** Estonia  
**Project ID :** 00106580/0001 Project Established  
**ICS :** 13.060.30, 91.010.30, 91.140.80  
**National Ref :** prEVS 846  
**Title :** Site sewer system  
**Scope :** This Standard applies to property sewer system, through which the waste water flows into the city or town public sewerage or recipient. Property sewer system consists of buildings sewer system, together with the equipments (blocking devices, pumping stations, treatment manholes) and inside property situated system within the manholes and local treatment systems. Standard does not deal with water supply for firefighting. Standards must be followed in the design, installation, testing and re-construction of existing sewage systems.  
**Relatedness :**

**Country :** Serbia **Latest Date for Comments :** 2012-02-22  
**Project ID :** 00032243/0001 **Draft for public enquiry**  
**ICS :** 87.040  
**National Ref :** SRPS H.C8.993  
**Title :** Standard Practice for Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings  
**Scope :** This practice measures the volatile organic compound (VOC) content of solventborne and waterborne paints and related coatings as determined from the quantity of material released from a sample under specified bake conditions and subtracting exempt volatile compounds and water if present.

**Scope :** This practice provides a guide to the selection of appropriate ASTM test methods for the determination of VOC content.

Certain organic compounds that may be released under the specified bake conditions are not counted toward coating VOC content because they do not participate appreciably in atmospheric photochemical reactions. Such negligibly photochemically reactive compounds are referred to, as exempt volatile compounds in this practice. VOC content is calculated as a function of (1) the volume of coating less water and exempt volatile compounds, and (2) the volume of coating solids, and (3) the weight of coating solids.

**Relatedness :**

National : New  
International : Identical to ASTM D3960-05

<b>ICS :</b>	71.040.50		
<b>National Ref :</b>	SRPS H.C8.994		
<b>Title :</b>	Standard Test Method for Speciation of the Volatile Organic Compounds (VOCs) in Low VOC Content Waterborne Air-Dry Coatings by Gas Chromatography		

**Scope :** This test method is for the determination of the weight percent of individual volatile organic compounds in low VOC content waterborne latex air-dry coatings. The method is intended primarily for analysis of waterborne coatings in which the material VOC content is below 5 weight percent. The method has been used successfully with higher VOC content waterborne coatings.

This method may also be used to measure the exempt volatile organic compound content (acetone, methyl acetate, and p-chlorobenzotrifluoride) of waterborne coatings. The methodology is virtually identical to that used in Test Method D6133 and similar to that used in Test Method D6438.

Volatile compounds that are present at the 0.05 weight percent level or greater can be determined. Solid phase microextraction will detect volatile compounds at lower levels.

**Subsector I19: NUCLEAR ENERGY**

---

Subsector : I19 Registration Date : 2012-01-12  
Organization : ASI  
Country : Austria  
Project ID : 00024357/0001 Project Established  
ICS : 11.040.50  
National Ref : ÖNORM S 5276  
Title : Acceptance testing of gamma cameras  
Scope : This ÖNORM is both the basis for the legally required acceptance testing and the basis for the review of its supply agreement with the manufacturer. Since the determination of all parameters specified by NEMA is an extremely time-consuming task, in this ÖNORM a subset of measurements is defined that which can help in identifying significant problems. The purpose of this ÖNORM is to check the significant points provided by the manufacturer's specification in an abbreviated procedure. It is therefore essential for selected test positions, which are achieved with meaningful test equipment, carried out acceptance tests. If necessary, the tests according to NEMA are replaced by simplified custom procedures. Reference values specifying tolerance values for the following consistency checks are set to ensure optimal image quality at low dose to the patient.

Project ID : 00024358/0001 Project Established  
ICS : 13.280, 91.040.01  
National Ref : ÖNORM S 5280-2  
Title : Radon - Part 2: Technical precautionary measures for buildings  
Scope : This Austrian Standard may be used for planning and construction of new buildings intended for habitation, working and residence purposes (e.g. dwelling houses, schools, kindergartens, workplaces). The present ÖNORM provides the planning and construction experts with a summary of available information concerning precautionary measures against radon, according to the state of knowledge and of technology as of today. The use of methods and materials mentioned here requires technical know-how in the field of building construction. The objective of this ÖNORM is to define the requirements for conceptual, building and technical measures to prevent enhanced indoor exposure to radon within new buildings; to mention proven and tested methods and materials in civil engineering suitable to avoid exposure to radon; to specify criteria for the determination of the effect and assurance of the efficiency of the precautionary measures taken.

**Title :** Ispitivanje mineralnih ulja i drugih zapaljivih tečnosti – Određivanje tačke paljenja u zatvorenom sudu prema Abel-Penskom  
**Scope :** This standard specifies a test method according to Abel-Pensky for determination of flash point of liquid fuels and other combustible liquids by the closed tester, for the interval from 5 °C do 65 °C. This procedure is applicable for measurement on temperatures under 5 °C, but mistakes are greater than those stated in point 12. This standard is applicable for determination of flash point of pure solvents. But it is not applicable for determination of flash point of vernishes and other coating materials, adhesives and similar mixtures.

**Title :** Standard test method for heat of combustion of liquid hydrocarbon fuels by bomb calorimeter  
**Scope :** 1.1 This test method covers the determination of the heat of combustion of liquid hydrocarbon fuels ranging in volatility from that of light distillates to that of residual fuels. 1.2 Under normal conditions, this test method is directly applicable to such fuels as gasolines, kerosines, Nos. 1 and 2 fuel oil, Nos. 1-D and 2-D diesel fuel and Nos. 0-GT, 1-GT, and 2-GT gas turbine fuels. 1.3 This test method is not as repeatable and not as reproducible as Test Method D 4809. 1.4 The values stated in SI units are to be regarded as standard. The values in parentheses are for information only. 1.5 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use. For specific hazard statements, see Sections 7 and 9 and A1.10 and Annex A3.
