Title : Facility operation - Data structures - Part 1: Information relevant data groups
Scope : This Austrian Standard provides rules for required basic geospatial data, update data flows, data structures and groups of information relevant data. It supports the appropriate use of data, but does not regulate processes. It forms the basis for building object-specific data structures and further data applications in objects. This Austrian Standard applies to the entire life cycle of an object, particularly for object use, and therefore affects all businesses

Scope : and organizations that are involved in the construction or operation, such as builders, investors, developers, architects, planners, developers, owners, operators, service providers of facility management, property management and in particular the users of objects. This Austrian Standard is the basis for the development of standards of spacial and object data management, task-specific data repositories (historization) and Information comparisons (benchmarking). Overview-representations of emerging data, according to compatibility, access to intermediate levels in work routines and comparisons of data quantity and cost specific contexts will be easier.

Title : Cultural Heritage - Indoor microbial aerosol surveys - Passive sampling method by cultural-plate

Scope : The norm concerns the method for quali- quantitative detection of viable cultivable microflora diffused by air in indoor environments by passive sampling. This method consists of exposition of Petri dishes, containing a solid cultural medium; it permits to determine the aerodiffused viable microorganisms may deposit on surfaces by gravity or aerodynamic movements. It is more suitable to detection of heterotrophic cultivable bacteria and microfungi. To process the analyses report, the norm includes a data sheet to collect information on the examined environment and a sheet for monitoring results report.

Title : Guidance on project management
Scope : This International Standard provides overarching guidance for project management. This International Standard may be used by any type of organization, including public, private or community organizations, and to any type of project, irrespective of complexity, size, or duration. This International Standard provides a high-level description of the concepts and processes that are considered to form sound practice in project management. This International Standard places projects in the context of programmes and project portfolios. It does not provide detailed guidance on the management of programmes and project portfolios. Topics pertaining to general management disciplines are addressed only as they relate to project management.

Title : Property valuation - Part 8: Cost approach
Scope : The standard series EVS 875 applies to property valuation. These standards are to be used for valuation activities and using valuations, especially for activities dealing with lending and financial reporting. The users of these standards are real estate specialists, construction specialists, environment specialists, financial reporting specialists (accountants, auditors), credit institutions, higher education institutions. These standards create a basis for unified approach to property valuation, satisfying the needs of private and public sector. EVS 875-8 gives the objectives and possibilities of using the cost approach. It covers the valuation of land and buildings, finding the depreciation and separating the value of land and buildings.

Subsector S27: WASTE - CHARACTERIZATION, TREATMENT AND STREAMS

Subsector : S27 Registration Date : 2012-02-09
Organization : ASI
Country : Austria
Project ID : 00024479/0001 Project Established
ICS : 13.030.30, 13.300
National Ref : ÖNORM S 2105
Title : Classification and packaging of dangerous waste for transport
Scope : This ÖNORM includes requirements for the transportation of hazardous waste as
dangerous goods according to transport regulations (ADR/RID). She acts therefore on the
classification of waste under the regulations for transport and the resulting labeling of the
used packaging material or transport unit. The ADR-class and UN number are also to cite in
the documents for the shipment of waste . As the rules for the classification, packaging and
transport of the entries in the transport paper (ADR) and the bill of lading (RID) are usually
identical, but the user usually only the ADR knows or uses, reference is made hereinafter
only to the ADR and its reference structure. For the packaging in which waste is
transported, which are dangerous goods, the regulations defined in these laws (eg
acceptability of the use, approval of type approval certifi kilometers) apply. Also for
residual content of hazardous waste in packaging, the ADR applies (see 3.6.2). The list of
hazardous wastes made in clause 5 is in accordance with Annex 5 of the Waste Catalogue
Ordinance.
