Subsector A99: UNDETERMINED

Subsector : A99 **Registration Date :** 2012-03-12
Organization : ASI
Country : Austria
Project ID : 00024522/0001 **Project Established**
ICS : 03.180
National Ref : ÖNORM ISO 29990
Title : Learning services for non-formal education and training - Basic requirements for service providers (ISO 29990:2010)
Scope : This International Standard specifies basic requirements for providers of learning services in non-formal education and training. In cases where the learning service provider is part of an organization that delivers products (goods and services) in addition to learning services, this International Standard only applies to the unit providing the learning services. Examples of non-formal education and training could include vocational training, life-long learning and incompany training (either outsourced or in-house).

ICS : 91.010.99
National Ref : prNS 3454

Title : Life cycle costs for building and civil engineering work - Principles and classification
Scope : This standard includes the calculation methodology and cost statement for calculating life cycle costs of buildings. The standard defines the cost items and concepts, and clarifies the relationship and the relationship between them. Life cycle costs include all costs incurred by the construction, use and disposal of a building. In addition to the activities / costs that are directly affected by the selected building and technical solutions, also includes standards of other activities / costs that are included in the facility management. The standard does not cover business expenses, but these can be affected by the choosed solutions.

Subsector : B29 Registration Date : 2012-03-12
Organization : ASI
Country : Austria
Project ID : 00024520/0001 Project Established
ICS : 93.080.20, 93.120
National Ref : ÖNORM B 4810
Title : Test methods for mechanical and physical properties of aggregates - Frost susceptibility of mixtures for unbound bases for road and airfield construction
Scope : This ÖNORM describes test methods to determine frost susceptibility of natural aggregate mixtures for unbound and hydraulically bound base and top layers in road and airfield construction. To aggregates consisting in part or in total of recycled aggregates of non-natural origin or which were industrially changed (concrete, asphalt, crushed bricks) clause 6.2 and 7 of this ÖNORM do not apply. For specific problems (e.g. geological questions, construction of waste disposal facilities) the content of fines (i. e. clay) may also be tested on deviating particle sizes.

Relatedness :

Subsector : B29 Registration Date : 2012-03-12
Organization : ASI
Country : Austria
Project ID : 00024531/0001 Project Established
ICS : 93.080.20, 93.120
National Ref : ONR 23131
Title : Filling of trenches with stabilized filling material - Catalogue of criteria for stabilized filling material

Scope : Stabilized filling materials (SFM) are accordingly conditioned materials for the filling of trenches, based on natural, manufactured or recycled aggregates or combinations of these, which, in a free-flowing state, are placed into trenches or caverns. The ensuing hardening process leads to the required strength and bearing capacity. However, manual re-excavation using pickaxes or shovels remains feasible during their useful life. "Stabilization" in the context of this ÖNORM comprises mechanical stabilization, e. g. appropriately graded particle size distribution curve, or hydraulic stabilization using up to 50 kg of binder per m³.

Subsector : B99 **Registration Date :** 2012-03-12
Organization : ASI
Country : Austria
Project ID : 00024521/0001 **Project Established**
ICS : 65.020.20, 65.020.40, 91.010.20
National Ref : ÖNORM B 2241
Title : Horticulture and landscaping - Works contract

Scope : This ÖNORM contains the general conditions of contracts for services of garden design and landscaping. The provisions of this ÖNORM must form together with the contract to the leading standards (eg ÖNORM technical content), the constant terms and conditions of construction, service and supply contracts. Specific provisions of the contract must be determined on an individual basis and have the supplies and services and the circumstances surrounding the provision of services to include. In totality, a complete description and unambiguous definition of agreed performance can be achieved. For the purposes of ÖNORM A 2050 or the BVergG 2006 the provisions of this ÖNORM both already in the tender and the offers are to consider. In consumer transactions mandatory provisions of the Consumer Protection Act are complied with. This is noted in this ÖNORM in the form of annotations.

ICS : 13.080.10
National Ref : ÖNORM L 1089
Title : Chemical analysis of soils - EDTA-extract for the determination of heavy metals
Scope : This standard is used for the determination of EDTA(Ethylendiamintetraacetat)-extractable heavy metals in soils and applies taking into account the general provisions of ÖNORM L 1053. The method determines primarily bound in a complex and at the surface of soil aggregates accreted binding forms of heavy metals. The determined concentrations correlate only partially with the uptake by plants. The possible values allow together with the results of extraction with strong mineral acids (ÖNORM L 1085) and with the results of

Scope : extraction with salt solutions (ÖNORM L 1094, parts 1-3) a better assessment of contamination. Heavy metals geogenic origin generally with the same total salary show much lower solubility than those of anthropogenic origin.

ICS : 13.080.10
National Ref : ÖNORM L 1092
Title : Chemical analysis of soils - Extraction of water soluble elements and compounds
Scope : This standard describes the extraction of water soluble elements and compounds in soils. The importance of water-soluble elements and compounds is their immediate availability for physical, chemical and biochemical processes in soils. The chemical composition of the soil solution is dependent not only from the content and the composition of the soluble elements and compounds but also from the solid soil matrix, especially of the quality and content of humus and clays, and from the respective water content of soil. Since the extraction of soil solution in naturally occurring water content is difficult to match extracts are used with higher water contents than naturally occurring.

National Ref : ÖNORM L 1094-2
Title : Chemical analyses of soils - Teil 2: Extraction of trace elements with ammonium acetate solution
Scope : This ÖNORM describes the extraction of that portion of trace elements (including elements of the problem) from agricultural, horticultural and forestry soils, which can be extracted with ammonium acetate. It is used to determine the portion of elements in the soil, which is referred to as "mobile" in particular, it is used to evaluate the ecological significance of increased element concentrations using test values and possibly establishing the need for action.

National Ref : ÖNORM ISO/TS 16281
Title : Rolling bearings - Methods for calculating the modified reference rating life for universally loaded bearings
Scope : This Technical Specification contains recommendations for the calculation of the modified reference rating life taking into consideration lubrication, contamination and fatigue load limit of the bearing material, as well as tilting or misalignment, operating clearance of the bearing and internal load distribution on rolling elements. The calculation method provided in this Technical Specification covers influencing parameters additional to those described in ISO 281. The directions and limitations given in ISO 281 apply to this Technical Specification. The calculation methods pertain to the fatigue life of the bearings. Other mechanisms of failure, like wear or microspalling (gray staining), lie outside the scope of this Technical Specification. This Technical Specification applies to tilted single-row radial ball bearings, subjected to radial and axial load and with radial clearance and tilt taken into account. It also applies to tilted single-row roller bearings, subjected to pure radial load and with radial clearance, edge stress and tilt taken into account. References to methods for the analysis of the internal load distribution under general load are given. The analysis of internal load distribution and modified reference rating life for multi-row bearings or bearings of a more complex geometry can be derived from the equations given in this Technical Specification. For these bearings, the load distribution for each individual row has to be considered. This Technical Specification is primarily intended to be used for computer programs and together with ISO 281 covers the information needed for life calculations. For accurate life calculations under the operating conditions specified above, it is recommended that either this Technical Specification or advanced computer calculations provided by bearing manufacturers, for determining the dynamic equivalent reference load under different loading conditions, be used.

National Ref : ÖNORM M 6341
Title : Rolling Bearings - Ceramic bearing balls - Determination of the strength - Notched ball test
Scope : This ÖNORM describes a procedure for the determination of the strength of ball bearings made of ceramics, preferably made of silicon nitride (SiN₄), with diameters from 3 mm up to 50 mm according to ÖNORM M 6319-3. This procedure can also be used for ball bearings made of other materials and respectively for other diameters, but the included prefactors are then inoperative.

Organization : UNI
Country : Italy
Project ID : 36002300/0001 **Project Established**
ICS : 53.020.01
National Ref : U36002300
Title : Guideline for the implementation of inspections on cranes and related accessories
Scope : This UNI Technical Report is intended to be used as Guideline in support of the employer, for the implementation of inspections, referred to Art. 71 comma 8 D. Lgs 81/08 and s.m.i., on cranes and related accessory, according to the current standards. It intends to provide a clear view on the followings topics: Tipe of inspections; Methodology of inspections; Specific inspections mode of the main components; Functional tests; Load tests; Stability tests; Safety precautions for the implementation of inspections; Flow-chards for the implementation of inspections; Major inspection; Checklist to carry out the major inspection of cranes by a competent person; Monitoring for crane design life; Competency required for persons who carry out crane inspections of cranes

Subsector T14: PACKAGING

Subsector :	T14	Registration Date :	2012-03-30
Organization :	AENOR		
Country :	Spain		
Project ID :	P0039232/0001	Project Established	
ICS :			
National Ref :	PNE 58015		
Title :	Steel static storage Systems. Free standing mezzanine. Principles for structural design		
Scope :	The scope of this standard is the design principles of free standing mezzanines of steel static storage systems. This standard specifies the structural design requirements applicable to all types of systems for good storage on freestanding mezzanine floor supported by columns. This standard has to be applied in conjunction with the standards EN 15512, EN 15620, EN 15629, EN 15635, EN 15878 and UNE 58013.
