Subsector B20: DRAINAGE EQUIPMENT

Subsector :	B20	Registration Date :	2012-06-25
Organization :	DS	Draft Issue Date :	2012-06-22
Country :	Denmark	Latest Date for Comments :	2012-08-15
Project ID :	0M264823/0001	Draft for public enquiry	
ICS :	91.140.80		
National Ref :	DSF/DS 432 Till. 1:2012		
Title :	Code of Practice for Sanitary Drainage - Wastewater Installations - Amd: 1 - Prevention against flooding - Anti-flooding devices for buildings - Classification		
Scope :	This code of practice applies to sanitary drainage installations in buildings and in the ground inside the site for transport of sewage, rainwater and drainage water. The transport can be let to main wastewater pipes, to a sewage disposal plant for reception and percolation. The code also applies to sanitary drainage for black liquid, liquid manure and similar liquid, from and including the floor outlet, channels etc. for the connection to containers. The code applies for both new installations and to improvements and additions to existing systems.		

Repairs of pipes and minor changes by replacement of specific sanitary appliances, sanitary tapware, devices, tanks etc. can be made with materials and methods which was allowed according to regulations in force when the installation was made.

Fire technical measures are not a part of this standard.

The overall requirements in clause 2 comprises all types of sanitary drainage installations also in clause 8 given special sanitary drainage installations. The requirements and directions in chapter 3 to 7 are aiming primarily on sanitary drainage installations as traditionally are made in Denmark. This means use of gravity systems where reductions of pressure variations are made by air supply through the water bearing pipes i.e. from possible airing.

Regarding drainage systems reference are made to DS 436 Code for practice for groundwater drainage of structures. The standard comprises specific pipe conditions. For non specific conditions reference is made to DS 475 Code of practice for trenching for underground pipes and cables.

Title : Cultural Heritage - Indoor microbial aerosol surveys - Active sampling method by impactors

Scope : The norm concerns the method for quantitative and qualitative detection of viable cultivable microflora diffused by air in indoor environments by active sampling. This method involves the aspiration of known volumes of air by sampler which direct the air stream at the collection surface, generally consisting of Petri dishes containing solid culture media. On the basis of the number of microorganisms developed in culture is possible to determine the charge of viable micro-organisms cultivated on a volume of air. The method is more suitable for the detection of cultivable heterotrophic bacteria and micro fungi
 To process the analyses report, the norm includes a data sheet to collect information on the examined environment and a sheet for monitoring results report.

Title : Radiation Protection - Steel quality - Determination of the content of tritium activity in steel and aluminum samples by liquid scintillation

Scope : Decommissioning of nuclear power plant facilities and free release of materials coming from dismantling operations imply the necessity of verifying compliance of the radioactivity content of materials with the authorized limits, in terms of mass and activity concentration. In the inventory of radioisotopes present in a NPP we find tritium (3H), which is produced during reactor operation both by activation and by ternary fission. Tritium is a non directly measurable radionuclide, so its concentration has to be determined by radiochemical analysis in a laboratory, preliminarily to free release operations. The method here proposed is applied to carbon steel and aluminium and is based on the dissolution of the sample in a persulfate sodium solution, followed by distillation and liquid scintillation counting. The method allows to reach minimum detectable concentrations of the order of 0,01 Bq/g, which are perfectly suitable for decommissioning applications. The good performance of the method, in terms of sensitivity, reproducibility and robustness, has been experimentally tested through an intercomparison among different laboratories taking part in the Working Group having the task of producing this standard; the intercomparison consisted in analyzing samples coming from the same highly tritium contaminated drain line, taken from the Italian Latina NPP and comparing the results and the associated uncertainties .

National Ref : prPN-Z-04441
Title : Air purity protection -- Determination of nitroethane in workplaces by gas chromatography
Scope : This standard gives a method for the determination of the content of nitroethane (CAS: 79-24-3) in workplace air by gas chromatography with a flame ionization detection. The method is applicable during control of the hygienic-sanitary conditions. The lowest concentration of nitroethane which can be determined by the method in the sampling and determination conditions specified in the standard is 7,5 mg/m³

Title : Air purity protection -- Determination of calcium oxide in work places by flame atomic absorption spectrometry
Scope : This standard gives a method for the determination of the content of calcium oxide (CAS: 1305-78-8) in workplace air by flame atomic absorption spectrometry. The method is applicable during control of the hygienic-sanitary conditions. The lowest concentration of calcium oxide which can be determined by the method in the sampling and determination conditions specified in the standard is 0,12 mg/m³ (for air volume 720 l)

Title : Air purity protection -- Determination of 1,2,3 trichloropropane in workplaces by gas chromatography
Scope : Gives the method consists in the adsorption of trichloropropane vapour on activated charcoal, desorption of the compound with carbon disulfide and determination of the obtained solution by gas chromatography. The lowest concentration of trichloropropane which can be determined by this method is 6 mg/m³

Relatedness :
