**ICS :** 91.140.30  
**National Ref :** DSF/DS 447:2012  
**Title :** Ventilation in Buildings - Mechanical, natural and hybride ventilation systems  
**Scope :** This standard specifies the requirements for ventilation in buildings intended for human occupancy. The standard applies to ventilation systems for residential and other buildings than residential buildings.  
 The purpose of this standard is to ensure that ventilation systems are designed, constructed and can be maintained in a technical and hygienic responsible way considering comfort and energy efficiency.  
 This standard comprises provisions for design, construction and testing and operation of ventilation systems.  
  
 The standard comprise provisions for design, construction, testing and commissioning of

---

**Scope :** mechanical ventilaiton installations.

The code of practice applies for mechanical ventilation installations including the mechanical part of hybrid ventilation installations, which are installed permanently in buildings and have the main purpose to keep one or more indoor air parameters within close specified limits.

The code of practice does not apply for installations which main purpose are to remove pollutions produced by industrial or similar prosesesses, but it comprises installations which shall establish the necessary replaces air.

The code of practice does not apply to fire requirements to ventilation installations; reference is made to DS 428, Dansk Ingeniørforening's Code of Practice for technical measures for fire protection in ventilation systems for buildings,

**Title :** Flexible sheets for waterproofing - Reinforced bitumen sheets for waterproofing of concrete bridge decks and other trafficked areas of concrete - Definitions and characteristics

---

**Scope :** This document specifies characteristics and performance of reinforced bitumen sheets for waterproofing of concrete bridge decks and other trafficked areas of concrete where the waterproofing system is bonded to the concrete deck and overlaid by asphalt. The standard also specifies the test methods used for verifying the characteristics and performance.

| <b>Project ID :</b>   | 0M253996/0001   | Draft for public enquiry          |            |
| <b>ICS :</b>          | 91.140.10   |                                   |            |
| <b>National Ref :</b> | DSF/DS 469:2012   |                                   |            |
| <b>Title :</b>        | Heating- and cooling systems in buildings   |                                   |            |
| <b>Scope :</b>        | This standard specifies requirements for heating and cooling systems. The requirements are intended to give a technical correct quality level, with the required thermal indoor climate maintained with the lowest possible energy consumption. |                                   |            |

The standard applies to all types of heating- and cooling systems, which have the purpose to supply rooms and buildings and connected systems with heating or cooling. The heating media respectively the cooling media in the system can be either e.g. water, air or electricity.

The standard applies to heating systems of the following type:

- Central heating
- Air heating
- Electrical heating

The standard applies to cooling systems of the following type:

- Central cooling
- Air cooling

The standard requirements for heating- and cooling systems are valid for all types of supply systems e.g.:

- Gas boilers
- Oil boilers
- Biomass boilers, e.g. wood, wooden pellets, straw and corn
- Solar heating
- Heat pumps
- District heating
- Geothermics
- Electricity
- Cooling machines
- Groundwater cooling
- Sea-, harbour- and sea water cooling
- District cooling

The standard does not apply to the supply system itself, but only the part of the supply system which naturally is part of the heating- og cooling system, including determination of the dimensioning performance.

The standard does not apply to the individual e.g. :

---

---

**Scope :**

- Boiler
- District heating main cock, including the service valve
- Heat pump
- Cooling machine
- Electrical power supply

The standard does not apply to ventilation and fire technical requirements.

The standard does not apply to personal safety (for neither consumer nor operating personnel)

**Title :** Powder metallurgy — Hot Isostatic Pressing materials — Argon detection using gas

---

**Title :** chromatography technique

**Scope :** This national standard specifies a gas chromatography method of determining argon levels in the range 0.001 ppm to 5 ppm in gas atomized metal powder produced products, consolidated by Hot Isostatic Pressing. The standard recommends certain allowable argon levels for products and materials covered by this standard; alloy steel, stainless steel, nickel and cobalt base alloy components for use in general and pressure purposes. Included are pipes, flanges, fittings, valves, and similar parts. The determination of the argon levels applies to a specific type of equipment which is described in this national standard. The standard also describes the calibration of the equipment and the preparation of the samples and reference samples. This standard can also be used for other types of compacted and/or densified powders as guidance.

**ICS :** 13.080.05

**National Ref :** DSF/DS 3077

**Title :** Horizontal - Representative sampling

**Scope :** This draft standard is a matrix-independent standard for representative sampling. Compliance with the principles herein ensures that a specific sampling methods (procedure) is representative. This draft standard sets out a minimum competence basis for reliable planning, performance and assessment of existing, or new sampling procedures with respect to representativity. This draft standard invalidates grab sampling and other incorrect sampling operations, by requiring conformance with a universal set of seven Sampling Unit operations. This draft standard specifies two simple quality assurance measures regarding:

- 1) sampling of stationary lots, the Relative Sampling Variance test (RSV)
- 2) sampling of dynamic lots, Variographic Analysis (VA) also known as variographic characterisation, with an analogous RSV-1-dim.

This draft standard stipulates maximum threshold levels for both quality assurance measures. This draft standard is based on the Theory of Sampling (TOS). A comprehensive background for TOS can be found in clause 2, Normative references. This draft standards also contains a full complement of additional references and background literature (see Bibliography).

This draft standard enforces professional self-control by stipulating mandatory disclosure of one of two comprehensive quality approaches as produced by RSV or variographic characterisation (QO's) to all parties involved.

This draft standard specifies documentation and reporting of sampling representativity and efficiency for each analyte in combination with a specific class of materials respectively. Any deviation from this standard's QOs is to be reported and justified. This draft standard employs a dual acceptance approach: items not mentioned are not acceptable as modifications in any sampling procedure or sampling plan, unless specifically tested and assessed by the QOs described herein- while all modifications successfully passing this test requirement are acceptable.

**Title :** Public entertainment systems - Specifications for design, calculation, manufacture and use and maintenance of trusses, towers and associated structural components made of aluminium and steel or other alloys  
**Scope :** This document specifies the design, calculation, manufacture and use and maintenance of trusses, towers and associated structural components made of aluminium and steel or other alloys used in the public entertainment industry.  
The structures assembled with these elements can have complex forms through the use of corner blocks, arcs and other special elements.  
Truss constructions and towers are typically used to support static and dynamic loads or to serve purely decorative purposes. They can be hung, ground- or wall-supported, permanently installed or used as a moving construction.
