**Title :** Biodiversity survey - specifications, implementation and reporting

**Scope :** This standard covers specification, implementation and accounting of biodiversity surveys. It specifies minimum demands for identifying, delineating and assessing geographic areas of importance for biodiversity. It is applicable to all biotopes, whether terrestrial, freshwater or marine. The standard can be applied even if the natural values of some biotopes are less well known than others. Landscape ecological analyses are not included. Mapping and assessment of other ecosystem services than biodiversity is not included. Surveying and mapping of species occurrence over and above what is necessary for a natural value assessment is not included.

**Scope :** Today's standards provide poor information on office cuts ability to operate effectively in an office environment. This standard clarify how the screens and single object must be described acoustically so that its function can be translated into their ultimate use in a room. This standard is intended to be used as a basis for SS 25268:2007 so that the measurements and evaluations made for different furnishing products can be valued and compared equally and can later be used to make a qualified and standardized Quality declaration of the acoustic environment. The purpose is also to be able to find a more accurate way to verify the operation of open offices in sound classification A and B in SS 25268:2007 (Section 5.5.4). This standard specifies when various interior units for offices, schools and other public buildings to be considered as the cohesive surfaces, screens or single items. The standard also describes how these environments should be evaluated with respect to absorption and shielding attenuation when these have been checked in accordance with EN ISO 354, EN 1793-2 and EN ISO 10053.

**Project ID :** NOT12011/0001 Draft for public enquiry  
**ICS :** 91.120.25  
**National Ref :** prNS 8141-2  
**Title :** Vibration and shock - Guideline limit values for construction work, open-pit and pit mining and traffic - Part 2: Effects of vibration on constructions from construction work other than blasting, including from traffic  
**Scope :** This standard establishes a method for determining guideline limit values for vibrations in construction works (except from blasting) in connection to construction work and traffic. The standard describes how the vibrations shall be measured and evaluated. The limit values are defined by physical quantities specified in clause 3 and have been specified with the aim of avoiding damage to construction works. Clause 6 describes the matters that have to be included in the survey that is made prior to construction work. This part of the standard does not handle limit values for tunnels and caverns. The limit values in this part of NS 8141 do not apply to human responses to vibrations (see NS 8176 for traffic), or infrastructure, nor do they apply to damage that may be caused to fixtures, fittings and equipment in the construction works. This part of the standard only covers the risk of well-defined vibrations and not damage from deformations/settlements of soil in the ground caused by vibrationinducing activities. The standard does not apply to vibrations arising naturally such as earthquakes, wave action, etc. Limit values on damage to infrastructure like water supply and gas pipes, electric wires and similar are not included in this standard, but such infrastructure shall be surveyed, see 6.5.
